

Carbon Reduction Plan

Supplier name: Viatris UK Healthcare Ltd (“Viatris UK”)

Publication date: 18/12/2024

Commitment to achieving Net Zero

Viatris Inc. (“Viatris”) is committed to minimizing our impact on the environment while safeguarding a reliable supply of medicine. Climate change mitigation and adaptation are part of protecting the resiliency of our supply chain, the health and well-being of patients we serve and the communities on which we depend. For us, that includes systematic work to reduce carbon emissions, increasing the use of renewable energy, enhancing efficiency in our own operations, and working with partners to encourage their efforts. We are also working to protect our employees and operations from the impact of climate change through effective planning, risk mitigation and building resilience against the impact of extreme weather.

To this end, we have set science-based greenhouse gas (GHG) reduction targets in support of the Paris Climate agreement with the ambition to limit global warming to 1.5°C. These targets have been validated and approved by the Science Based Targets initiative (SBTi), in November 2022.

Viатris’ climate targets

- **Targets:** Reduce absolute Scope 1 and 2 GHG emissions 42% by 2030^{1*} and reduce Scope 3 GHG emissions covering purchase goods and services, capital goods, fuel and energy related alternatives and upstream transportation and distribution 25% by 2030.¹

¹ 2020 as baseline

*The target boundary includes land-related emissions and removals from bioenergy feedstock

Making progress on our company wide near-term targets by 2030 is our priority. It is within that framework; we commit to reducing GHG emissions in support of a net zero ambition by 2050 for our UK location. As we make progress on our science-based climate targets, we will continue to assess the appropriate and science-based next phase company-wide targets towards this net zero ambition.

Science-based targets provide a clearly defined pathway for companies to reduce GHG emissions, helping prevent the worst impacts of climate change while also helping to preserve future business growth opportunities. Targets are considered ‘science-based’ if they are in line with what the latest climate science deems necessary to meet the goals of the Paris Agreement – limiting global warming to well-below 2°C above pre-industrial levels and pursuing efforts to limit warming to 1.5°C.

The SBTi recommend that companies should prioritize rapid, deep emission reductions by setting near-term targets: Rapid, deep cuts to direct and indirect value-chain emissions are the most effective, scientifically-sound way of limiting global temperature rise to 1.5°C.

We agree with this recommendation and will remain focused on following that approach across our global operations. At a global level, Viatris' near term GHG-reduction targets to reduce – by 2030 (2020 is the base year) – scope 1 and scope 2 emissions by 42% and scope 3 emissions by 25% have been approved and validated by the SBTi. SBTi has classified Viatris' scope 1 and 2 target ambition and has determined that it is in line with a 1.5°C trajectory.

Viatris reports annually environmental and climate -related commitments, work and performance. Viatris' response to the CDP questionnaire is available on the CDP [public response page](#).

Requested item: Baseline Year: 2020

Requested item	Viatris input – UK
Baseline year emissions: EMISSIONS TOTAL (tCO2e)	2020
Scope 1	0
Scope 2	399
Scope 3* (cover scope 3 categories 4) Upstream Transportation & Distribution; 5) Waste Generated in Operations, 6) Business Travel; 7) Employee Commuting; 9) Downstream Transportation & Distribution)	4 105
Total Emissions	4504

*Where 2020 data was not available to specific categories, future years' data was used as a proxy.

Requested item: Current Emissions Reporting

Requested item	Viatris input – UK
EMISSIONS TOTAL (tCO2e)	2023
Scope 1	0
Scope 2	295
Scope 3** (Included Sources)	4105
Total Emissions	295

Regarding scope 1 emissions: Viatris UK sites in scope of this CRP does not have any scope 1 emissions, hence 0 is accurate.

*** Viatris reports the total corporate Scope 3 footprint annually in our submission to CDP climate program and does not calculate scope 3 emissions on a country basis. Since the 2020 UK Scope 3 footprint represents less than 0.5% of Viatris' corporate scope 3 emissions, we are reporting the value calculated for 2020 as a proxy for the 2023.*

Emissions reduction targets

- **Targets:** Reduce absolute Scope 1 and 2 greenhouse gas (GHG) emissions 42% by 2030^{1*} and reduce Scope 3 GHG emissions covering purchase goods and services, capital goods, fuel and energy related alternatives and upstream transportation and distribution 25% by 2030¹. These near-term targets have been validated and approved by the Science Based Targets initiative (SBTi); this approved scope 1&2 target is in line with a 1.5°C trajectory.

¹ 2020 as baseline

*The target boundary includes land-related emissions and removals from bioenergy feedstock

Carbon Reduction Projects and Completed Carbon Reduction Initiatives

Viатris UK's operations are included in Viатris Inc.'s groupwide environmental health and safety management system and program, subject to companywide Environmental Stewardship and Climate Policies (to name just a few) and included in the companywide environmental goals and targets. In 2022 Viатris issued companywide GHG reductions targets, approved and validated by the SBTi, covering also the applicable parts of the Viатris UK operations.

- **Targets:** Reduce absolute Scope 1 and 2 greenhouse gas (GHG) emissions 42% by 2030^{1*} and reduce Scope 3 GHG emissions covering purchase goods and services, capital goods, fuel and energy related alternatives and upstream transportation and distribution 25% by 2030.¹ These near-term targets have been validated and approved by the Science Based Targets initiative (SBTi).

¹ 2020 as baseline

*The target boundary includes land-related emissions and removals from bioenergy feedstock

Key actions to progress on our SBTi targets include:

- Increasing renewable energy usage.
- Implementing energy efficiency projects.
- Transitioning to refrigerants with lower Global Warming Potential and preventing refrigerant leaks.
- Using alternative fuels and technologies.
- Utilizing existing programs, strategies and commitments to achieve our target.

Further measures we hope to implement in the future

Key actions to progress on our SBTi targets will continue to include:

- Increasing renewable energy usage.
- Implementing energy efficiency projects.
- Transitioning to greener lesser GWP refrigerants and preventing refrigerant leaks.
- Using alternative fuels and technologies.
- Utilizing existing programs, strategies and commitments to achieve our target.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.²

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.³

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

A handwritten signature in black ink that reads "Rupert Cory".
